

# Quick How-To: How to Charge Your Phone or Tablet

---

This guide is for first-time users who want to learn how to safely charge their phone or tablet.

## Step-by-Step Instructions

### Step 1: Find Your Charger

- Look for the charging cable that came with your device.
- One end is small (going into your phone); the other is larger (USB, goes into a wall block or outlet).

Each device has its own charger. If it doesn't fit easily, don't force it.

### Step 2: Plug It In

- Connect the small end to your phone or tablet.
- Plug the other end into a wall outlet or USB charger.

### Step 3: Look for Charging Signs

- You should see a lightning bolt ⚡ or battery icon on the screen.
- Some phones vibrate or make a sound when charging begins. This means it's working.

### Step 4: Let It Charge

- Leave the device charging for at least 1 hour.
- Don't use it heavily while charging, especially if the battery is low.

### You Did It!

You've successfully charged your phone or tablet!
